"Three distinct RNAs for the surface protease gp63 are differentially promastigotes to an infectious form.";
J. Biol. Chem. 267:1888-1895(1992)

-

FUNCTION: Has an integral role during in the mammallan host.

CATALYTIC ACTIVITY: Preference for hyder and basic residues at P2 and P3'.

Cleaved at -Ala-Tyr-|-Leu-Lys-Lys-.

COFACTOR: Binds 1 zinc ion per subunit

This SWISS-PROT entry is copyright. It is produced through between the Swiss Institute of Bioinformatics and the EN

The present invention describes a recombinant agfA gene (I) where a segment of the gene has been replaced by a segment of a foreign DNA sequence which encodes a foreign epitope or antigen. Also described are: (I) use of thin aggregative fimbriae (SEF17/TAF) nucleation depended assembly system of strains of Salmonella, Escherichia coli and Enterobacteriaceae for the production of fimbriae comprising recombinant AgfA, CsgA and AgfA-homologue fimbria mubunits, respectively; (2) directing recombination of a recombinant gene into the chromosome of the homologous species; (3) directing recombination of a recombinant gene

into the

chromosome

recombinant gene

Recombinant agfA gene having a segment replaced by a foreign DNA sequence which encodes foreign epitope or antigen, expresses recombinant AgfA protein useful for eliciting immune response in animal.

The Salmonella AgfA protein and DNA are used in vaccine

and genetic

```
The present invention describes a recombinant agfA gene (1) where a CC segment of the gene has been replaced by a segment of a foreign DNA CC sequence which encodes a foreign epitope or antigen. Also described are: (1) use of thin aggregative fimbriae (SERI7/TAF) nucleation depended are: CC enterobacteriaceae for the production of fimbriae comprising recombinant GC AgfA, CSgA and AgfA-homologue fimbria subunits, respectively; (2) directing recombination of a recombinant gene into the chromosome of the homologous species; (3) directing recombinant gene; and (4) eliciting a minumure response in an animal, CC comprising separating an amino acid polymer comprising a recombinant accombinate segment of the foreign are combinant AgfA contents of sequence or sequences grown on a Salmonella, E. coli or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 RESULT 3

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Enterobacteriaceae host cell, from the host cell and introducing the polymer into the animal in conjunction with a carrier or diluent. (I) useful for the expression of recombinant AgfA protein which is useful eliciting an immune response in an animal. In a fimbrial presentation system the heterologous antigens are presented in high numbers (up to 500,000 copies/cell), the hybrid fimbrin protein possesses both the immunogenicity and adhesion properties relevant for an efficient live vaccine, the carrier fimbrial subunit proteins are usually strong immunogens, which may be important for directing an immune response against the inserted epitope, and hybrid fimbriae are easy and inexpensive to purify in large amount. The present sequence is given in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                   03-JUN-1997.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Salmonella enteritidis

The present invention describes a recombinant agfA gene (I) where a segment of the gene has been replaced by a segment of a foreign DNA sequence which encodes a foreign epitope or antigen. Also described are: (1) use of thin aggregative fimbriae (SEF17/TAF) nucleation depended assembly system of strains of Salmonella, Escherichia coli and Enterobacteriaceae for the production of fimbriae comprising recombinant and AndA-homologue fimbrin subunits, respectively; (2)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  used to provide diagnostic assays for Salmonella and/or enteropathogenic bacteria of the family Enterobacteria. It can also be used to provide proteins and antibodies which can be used for assays. The nucleic acid sequence can be used to provide probes or primers which can specifically hybridise to nucleic acid molecules from greater than 99% of Salmonella strains that are pathogenic to warm-blooded animals relative to nucleic acid molecules from tirtually all other microbial organisms.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             CC directing recombination of a recombinant gene into the chromosome of the CC homologous species; (3) directing recombination of a recombinant gene CC back into the chromosome of the homologous species, replacing the native CC comprising gene; and (4) eliciting an immune response in an animal, CC protein containing an amino acid polymer comprising a recombinant AgfA cc acid sequence or sequences grown on a Salmonella, E. coli or CC Enterobacteriaceae host cell, from the host cell and introducing the useful for the expression of recombinant AgfA protein which is useful for the expression of recombinant AgfA protein which is useful for celliciting an immune response in an animal. In a fimbrial presentation CC system the heterologous antigens are presented in high numbers (up to immunogenicity and adhesion properties relevant for an efficient live capainst the inserted epitope, and hybrid fimbriae are usually strong against the inserted epitope, and hybrid fimbriae are usually strong capainst the inserted epitope, and hybrid fimbriae are easy and the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Query Match

CC directing recombination of a recombinant gene into the chromosome of the CC back into the chromosome of the homologous species, (3) directing recombination of a recombinant gene into the chromosome of the CC back into the chromosome of the homologous species, replacing the native CC comprising separating an amino acid polymer comprising a recombinant Agfa CC protein containing a replacement segment or segments of foreign amino CC Enterobacteriaceae host cell, from the host cell and introducing the CC polymer into the animal in conjunction with a carrier or diluent. (1) is CC eliciting an immune response in an animal for CC system the heterologous antigens are presented in high numbers (up to 100,000 copies/cell), the hybrid fimbrin protein bossesses both the CC vaccine, the carrier fimbrial subunit proteins are usually strong CC against the inserted epitope, and hybrid fimbriae are usually strong CC inexpensive to purify in large amount. The present sequence is given in txx
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Matches 128;

(I) is useful for the expression of recombinant AgfA protein which is useful for eliciting an immune response in an animal. In a fimbrial presentation system the heterologous antigens are presented in high numbers (up to 500,000 copies/cell), the hybrid fimbrin protein possesses both the immunogenicity and adhesion properties relevant for an efficient live vaccine, the carrier fimbrial subunit proteins are usually strong immunogens, which may be important for directing an immune response against the inserted epitope, and hybrid fimbriae are easy and the accomplished to purify in large amount. The present sequence is given in the accomplished to the present incompliance are cased and the present sequence is given in the accomplished to the present incompliance.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          directing recombination of a recombinant gene into the chromosome of the homologous species; (3) directing recombination of a recombinant gene back into the chromosome of the homologous species, replacing the native copy of that gene; and (4) eliciting an immune response in an animal,
